
EA Latest Image

Posted by DreNL - 2006/03/10 22:47

working on a module which shows only the latest images. Background of table definable, number of images changeable and if you want to show or hide the title is also changeable.

The module is ready and downloadable in the downloads section. I am working on integrating horizontal and vertical option in the same module. When this is working I will also transform the hot properties module for this.

Re:EA Latest Image

The horizontal/vertical option is built in in version 1.1. Also you can choose whether you want to see background colors in vertical mode.

In horizontal mode you can choose how many pictures in total you want to show and how many pictures per row. So if you choose 6 pics total and 3 per row you get 2 rows with 3 pics.

Hope you will have no problems.

Andre.

Hi, thanks for a nice module!

Would it be possible to add a condition, if no picture is available to display automatically some nopic.jpg, to not see missing pictures in the browser?

Thanks Dusan

Insert an "if" If the field = null then...etc etc..

Add this line in the image path

#build image path

```
if($img != null) {
$imgpath = $mosConfig_live_site . $img->path . "t" . $img->fname . $img->type;
}
else {
$imgpath = $mosConfig_live_site . "/components/com_estateagent/pictures/nopic.png";
}
}
```

sorry, i don't see where to download this module; please post the url to the download link

thanks
Maxi:blink:

the path to the "nopic.png" is wrong. the module looks for the file in the directory "mod_ea_latest_img", but the directory it created during installation is called "mod_me_latest_imgscroller"

no big deal.. but it needs to be changed
