
Listing Items Alphabetically -- How do I do it?

Posted by warden - 2006/06/23 22:57

I am using Estate Agent and so far it is going fairly well I have managed to customize it to my liking.

A few thing I am struggling with.

All of our homes have names. I would like the homes to list by name instead of by how I add them. How do I acheive this?

example can be found here

http://www.coventryloghomes.com/joomla/component/option,com_estateagent/act,cat/task,showCE/id,2/

I would like the Alpine to come before the Andover. I added the Andover after the Alpine and now it is listed first (I am still in the development phase of this site....)

second:

When using the mortgage calculator pop up how do I get the homepage to stop loading up behind it. I want it to stay on the page that it was (where the mortgage calculator button is located).

Thank you for your help
