## EA 1.0.x and mySQL 5 - Solution

Posted by admin - 2006/05/04 23:55

---

Hi,

here's a solution for all those, who have problems with EA 1.0.x and mySQL 5 and won't wait for the upcoming update.

HowTo:

Download the attached zip file to your local harddisk. Then unzip and upload admin.estateagent.php into \$root/administrator/components/com\_estateagent/ on your webspace and overwrite the old one with it.

That's all. Now you should be able to see your estate objects overview at the admin backend.

## Re:EA 1.0.x and mySQL 5 - Solution

Posted by kptonak - 2007/03/13 22:30

OK, I am so happy that so many people have found a help in your solution but I would like to ask you if it works for EA 1.3.x because I have this version of EA, actually I can not find EA 1.0.x I have downloaded the attach. and then rewrote it but I still have the problem in administrator with objects and its adding. I am getting this message:

Fatal error: Only variables can be passed by reference in /domains1/ws285700/public/www\_root/\_mojpoprad/administrator/components/com\_estateagent/admin.estateagent.php on line 174

I am using PHP 5 and it has to stay because of other component using primary PHP 5...

If anybody can help please help because I am getting crazy and I want the component EA because it is so clear and easy....

THNX!!

Kamil

## Re:EA 1.0.x and mySQL 5 - Solution

Posted by admin - 2007/03/14 01:39

Hi Kamil,

I'm very sorry, but we don't support EA 1.3.x, which was forked in a very unfriendly way by our Greek friend, who's trying to get reputation through foreign work!

The only recommendation I can give you, is to remove EA 1.3x from your webspace and download the current version of MisterEstate from our downloadbase. MisterEstate is the official successor of the previously and wellknown EstateAgent.

MisterEstate was tested with PHP5 and mySQL5 and it works well with this environment. So you don't need any patch to run it under PHP5!

Posted by kptonak - 2007/03/14 08:11

Thanks so much for answering.

I had been trying and installing and uninstalling at first the MisterEstate and its latest version and with it I got the problem with objects. So then I was trying it with EstateAgent but the problem continued. I was in a contact with my server provider in affairs of databases. My actual php and My Sql are v. 5. Who who knows, I will be trying! Thx so for the

---

component and especially for support.

Cheers  
Kamil

Unfortunately does not seem to work with MisterEstate 1.1.0 / PHP5 /MYSQL5  
It breaks completely.

any tips for me cause i'm still having : "Upload failed, can't upload file"  
where/how can i find out what goes wrong internally ? By printing debug info somehow ?

library gd is installed for php5.  
permissions on directory ok

\*\*\*running out of options, any help welcome

Hi,

seems that it isn't a mySQL5 problem, but a problem of the /temp path setting. Could you check the setting of the /temp directory path, please.

I upgraded from 1.0.2 to 1.1.0...  
Everything seemed ok until I noticed that hot properties would not appear when clicking on the correspondent category!!!  
Tried a few tricks but thought that, for the client, it would not matter greatly.

Then, as I started adding more properties (objects), I came to adding images....  
No way!!! I have just spent the full night sitting here trying to figure out why, no matter what I do, I get the following

error....

"Upload failed! The file is too big!"

Obviously it isn't (just 35kb).

I have a number of Mister Estate site online and, though with my share of troubles, they are all working fine.

Found out that the server is running PHP 5.12 and MySQL 5.?? ..... and it is set session.save\_path to void

Will go to sleep now but, while I wait for the server admin to get back to me, if someone has got any idea about it.....

thnx

Hello everyone,

Can someone provide me with a solution for the problem.

Warning: Invalid argument supplied for foreach() in

/home/chris19/public\_html/vastgoedcentrale/administrator/components/com\_estateagent/admin.estateagent.html.php on line 70

My version is 1.0 Stable.

I would also pay \$20 if someone could solve this problem.

I have searched on the net and in this forum and the links to the solutions are not working anymore.

Many thanks

Christophe
