
how to fix sorting in extended search

Posted by rafaromeral - 2007/01/15 14:05

Hi, you might have notice that sorting does not work in extended search. To fix it do this in components/com_estateagent/estateagent.php (line 860 or so).

Replace this existing code:

```
$sort1 = mosHTML::makeOption( ' rent', _EA_OBJ_RENT );  
$sort1 = mosHTML::makeOption( ' price', _EA_OBJ_PRICE );  
$sort1 = mosHTML::makeOption( ' space', _EA_OBJ_DWSPACE );  
$sort1 = mosHTML::makeOption( ' rooms', _EA_OBJ_ROOMNR );  
$sort1 = mosHTML::makeOption( ' bedrooms', _EA_OBJ_BEDROOMS );  
$sort1 = mosHTML::makeOption( ' yobuilt', _EA_OBJ_YOBUILT );
```

With this new code:

```
$sort1 = mosHTML::makeOption( 'ORDER BY rent', _EA_OBJ_RENT );  
$sort1 = mosHTML::makeOption( 'ORDER BY price', _EA_OBJ_PRICE );  
$sort1 = mosHTML::makeOption( 'ORDER BY space', _EA_OBJ_DWSPACE );  
$sort1 = mosHTML::makeOption( 'ORDER BY rooms', _EA_OBJ_ROOMNR );  
$sort1 = mosHTML::makeOption( 'ORDER BY bedrooms', _EA_OBJ_BEDROOMS );  
$sort1 = mosHTML::makeOption( 'ORDER BY yobuilt', _EA_OBJ_YOBUILT );
```

Regards, Rafael.

However, this ordering (sorting) only works for the first page of results. When there is more than one page of results, the sorting is lost when navigating between them.

For example:

<< Start < Prev 2 Next > End >>

Only the first page, and the first time, gets the results ordered. If I navigate through the results pages the ordering is lost, even in when returning to the same page again. Anyone knows how to solve this?

Regards, Rafael.
