
Addition of new fields with the 1.0.2a in frontend

Posted by yoman - 2007/01/30 12:38

I shall want to know how to add fields for example: the surface of the ground frontend (Overview and Expose)
Tank's:)

I think that in the new version, it would be well to see the surface of the ground, especially that in the real estate, it is always asked it frontend (Overview and Expose).

Merci:)

Hello,
When I activate "Hot Offer", I have the message "Warning: mysql_real_escape_string() expects parameter 1 to be string, array given in /mnt/137/free.fr/e/3/thesejac/includes/database.php on line 136 ", I also put the mod EA Hot_v1.2 !!!!(

I relaunch this discussion, but it is very important.

I would like to display " Property Size: " in every case of figure, that is as well as in " Simple Type for sale that for Multi-type for sale " idem for rent. Because professionals of the real-estate that it was necessary to put this, especially for sale of single-family dwelling.

Tank's for your response:)
