
GOOGLEMAP API KEY ERROR

Posted by Eppacher - 2007/06/28 17:58

Hello, i have activated a new account on google, and take also the googlemap api key, which i have inserted in the configuration of Misterestate, Maps.

In the field GoogleMap API-Key i have inserted the key from Google.

I have left selection on satellite and after i saved i refreshed my homepage to check how it works.

But a problem happened :

"Fatal error: Call to undefined function: domxml_open_mem() in /home/rittenim/public_html/home/components/com_estateagent/includes/GMapAPI.class.php on line 1304"

CAN SOMEONE HELP ME?? THAT WOULD BE GREAT! THANKS FORWARD! :laugh: :laugh: :blush:

I have the same problem with exactly the same error message.

Does anyone have a solution?

I figured out the problem. It's nothing to do with the Googlemaps API Key. The error occurs because the PHP function domxml has not been installed on the server. You need to install it (if it's your server) or ask your Web hosting provider to install it for you.

in my case the map is blank (not work) and the error in the status bar is:

line: 661
character: 28
error: 'this.Xd.width' is null or there is not a object
code:0

what is the problem?
