
Print - function

Posted by dyhex - 2007/09/01 20:39

Hi again.

Ok, I'm close to a solution printing the exposé in a pop-up window only. The only thing is how to query the itemID. Maybe someone of you can help me out in this case since my PHP skills seems to be a bit rusty :(

here is the code:

```
<a href="javascript:void(0);"
onmousedown="window.open('http://yourdomain.com/index2.php?option=com_estateagent&act=object&task=print&id=X
XXXX', 'win2',
'status=no,toolbar=no,scrollbars=yes,titlebar=no,menubar=no,resizable=yes,width=800,height=600,directories=no,locatio
n=no');" title="Print"></a></td></tr><tr><td colspan="2">
```

I markt the position where the itemID has to be placed with XXXX. As far as I know it is possible to use PHP in the <a href > ? Maybe this is a way to go?

Thanks for your help.

```
Maybe it will be beter with some like <a href="javascript:void
window.open('http://DOMAIN.COM/index2.php?option=com_estateagent&act=object&task=print&id=XXXXX&pop=1&pag
e=0', 'win2',
'status=no,toolbar=no,scrollbars=yes,titlebar=no,menubar=no,resizable=yes,width=640,height=480,directories=no,locatio
n=no');">

```

:whistle:

You need to insert the function in class.estateagent.php and then insert it in the heather.

Don't forget to also have that option in config so you can make it active or not.
