Hi there!

As it stands Google Maps is not working correctly on some server settings!

Take a look [here](#) and
[here](#) to solve this problems.

Hope it helps

Hi,

I looking for solution and in the file "GMapAPI.class.php"
I located the problem in "function geoGetCoords" around the line1321.

Locate the code:

```
// if PHP5 available
$uri = "http://maps.google.com/maps/geo?q=".urlencode($address)."&output=xml&key=".$this->api_key;
$getpage = file_get_contents($uri);
$getpage = utf8_encode($getpage);
$xml = new SimpleXMLElement($getpage);
$coords = $xml->Response->Placemark->Point->coordinates;

return $coords;
```

And replace with this code:

```
// if PHP5 available
$uri = "http://maps.google.com/maps/geo?q=".urlencode($address)."&output=xml&key=".$this->api_key;
$getpage = file_get_contents($uri);
$getpage = utf8_encode($getpage);
```

```
$xml = new SimpleXMLElement($getpage);  
$cds = $xml->Response->Placemark->Point->coordinates;
```

```
//New  
$c = explode(",", $cds);  
$coords = $c;  
$coords = $c;
```

```
return $coords;
```

This solves my problem
