
mod_me_latest_imgscroller_1.0

Posted by miloskorac - 2007/10/21 06:45

Hello,

Module latest Image Scroller was installed normally. Bottom position of the module.

In IE horizontal scrolling is not smooth, also if a title has more words, then title below is generated in additional line, and picture goes up. Scrolling is so bad that it gives very poor impression to the visitor. Mouse over stops the scrolling and then mouse off continues scrolling.

In Mozilla, scrolling is nice and smooth (steady) but titles are cut off in the middle of the first line. It looks so crippled in that way. Mouse over stops scrolling and will not continue if the scrolling passed to the left side and there is only few properties left to go. It will stay still few moments and then with the white flash will disappear and starts again.

There is an option to hide Object Title.

So like that it can be used as property image scroller, even IE scrolling is less crippled.

Distance between pictures is not same in IE and Mozilla.

If I put 15 properties to scroll, in Mozilla last three are only dots.

Maybe it can be edited to be a scroller of images size 450x450, horizontal scrolling, and then we dont need gallery.

mod_me_latest_imgscroller.php line 136 there is a height of the content, so changing it to 140, Mozilla is not cut of on the first line, and shows three line of the text. IE is showing four line of the title text, and both looks weird when one image has two lines and other four or three, so it is not in the order, one image goes up other down.

mod_me_latest_imgscroller.php line 107 I like it with option marquee direction right, then left. If it is right then is coming from my right menu side, most of us have right menu. Left scrolling would be nice for Hebrew and Arabic sites.

Let me see if I can find something more, I like the module even is not perfect.

Would be nice that scrolling is 360, I mean that first and last picture connects, so that there is not empty space?

How can I make alienation of pictures with the texts, if there is one, two or more lines of text?

Module is better then those flash scrolling modules in many ways.

I'm afraid the module you are talking about is for ME Version 1.1.x
and not for ME 1.0

but i'm kind of newbie so please check it out (..in the download section as a 1st step)

greetings
Maxi
