
No object in mister estate categories...

Posted by nicola76b - 2007/10/22 08:53

Hi all,
I'm new to the forum so I hope someone could help me.
I closely follow the instruction but mr estate does not work.
I try to explain the problem:
I install joomla then go to admin, install component and I select mister estate zip file.
A message inform me that installation successfully done.
How suggest message, I create 3 categories (Appartaments, houses, Office), fill contact information in joomla contact manager and next configure ME configuration.
Then I create a menu link for the MisterEstate component at menu manager in Joomla.
Next (in admin page) I go to Component--MisterEstate--manage object and insert new object associated to Appartaments category (status PUBLISHED).

Now, if I watch only apartment category (in Mr estate) there is the object already created, but If I go to joomla home page and click on menu link that I created I can see my 3 categories, but ALL categories are empty.

I CAN'T SEE OBJECT ASSOCIATED TO Appartaments CATEGORY...

Where is my mistake?

Thanks a lot,

Nicola

hi

i was complaining about the same error.
however it was solely my own mistake.

the solution is simple:
after you create the objects you have to verify them. simply tick the tickbox in front of the object and then click the verify button on the right top corner of where you save the joomla settings.

kind regards.
