
Real estate Punta Cana and Misterestate

Posted by miloskorac - 2007/10/28 01:00

Hello,

www.realestatepuntacana.com

This is real estate web site for Punta Cana properties. Joomla and joomla (English, Spanish and German) with misterestate 1.0, with most of the modules from misterestate, some other modules as AI module (artificial intelligence agent for chat), GEO Visitors (module that presents list of countries that are visiting), Calendar module, Date module, Exchange rate module, flash slide show (two types), blog component for news, RSS reader for presenting daily news from Dominican Republic, AdSense modules, Weather page with HTML modules (and weather and earthquake scripts inside html modules), New sliding hot module for misterestate 1.1, etc.

Great site Milos, I really like the design. You used RT Modern Business, right?
I intend to use it also on a site - was it difficult to customize? Any (flagrant) bugs? ;)

Thank you,
ME_Fan

was it difficult to customize? NO

Any (flagrant) bugs? YES, Misterestate component gives W3.org errors

Template is super clean. Connected with misterestate, it degrades itself.
