
Moving the currency sign

Posted by equiweb - 2007/04/12 16:14

I have altered some of the object names to fit a UK based estate agents but want to have the GB £ sign appear before the property price and not after. Can anyone tell me how to do this? Thanks! Pete.:unsure:

You have to replace all the code that is like this:

```
value = .number_format($obj->rent,0,$params,$params) ." ".$params
```

with this:

```
$value = $params. " " .number_format($obj->rent,0,$params,$params)
```

in the estateagent.html.php file

Viva Chile!!!...

Hola compadre, menos mal que pillo un chileno por aquí, quería hacer una consulta pero como al parecer tu vas bien adelantado prefiero hacértela a tí.

Sucede que cuando intento poner precios sobre los 100 millones de pesos no puedo, me restringe solo a "100.000.000", ¿sabes como arreglar eso?

Segunda: ¿como puedo hacer para expresar tanto en \$ como en UF?

Ojala veas este post y de antemano gracias.

me restringe solo a \"100.000.000\",

I have the same problem. Any solution?

moved the currency sign but not the last one!!

Posted by Kit - 2008/06/07 01:27

Just like Viva Chile said in estateagent.html.php move the PHP code between the < and > which contains 'currency' to the beginning of the code line after the value param:

e.g:

```
$value = $params. " " .number_format($obj->rent,0,$params,$params) ;
```

Also to these lines, before the input boxes:

-

but can anyone find where to change the one that comes up as the rent field amount on the detailed info page of the

apartment/object, cos it's not in this file.

p.s. - the same applies to the me-search module - simply move the currency code

where you want it!

Cheers

Chris
