
Show regular objects tuning, how?

Posted by naggi - 2007/11/09 14:39

In the file 'estateagent.html.php' there is a function in line ~230:

```
function showCatObjects($object,$params)
```

Id like to add year of build value there (yobuilt) and I just can't get it there with `<?php echo $obj->yobuilt;?>` like the others can be put there.

So my question is in which database query I have to add that yobuilt that I can echo it like the rest? I know I have to get it to the \$object list first but where that is?

:blink:

it's in estateagent.php at line 474 (hot objects) and line 494 (regular objects)

There it was, yes! Thanks a lot!

Dunno how I have missed that place even I was searching with object word.
