
thumbnail alignment problem

Posted by KlausO - 2007/11/12 17:07

When the search results for properties appear, the last property's thumbnail is not inline with the one above it. Can anyone help me with this? Please. This is the link:

try to edit the maximum amount of chars for the object description at MisterEstate's configuration.

MisterEstate cuts off the description and in your case it has splitted a table. That's why you get this issue.
