
How to link a web page with a search result?

Posted by Monacchi - 2007/11/30 15:56

Hi, I want make this: when I click on a section I want be linked to a result of Misterestate search form
http://www.pegasusimmobili.it/index.php?option=com_estateagent&act=easearch&Itemid=1.
For example I click on a category "Italy" I want to be linked at all real estate that are in Italy etc.
I tried using the link of search result but this link generated by MisterEstate reserch form isn't like a link generated by Google where there is the key of serch integrated.
How can I do this?
I'm waiting.
Regards - Marco from Italy

up up up!!!
please! this is a very nice thing to make an image map selector in our homepage!
this can be another one feature to add in the wishlist area!

ADMIN, PLEASE, HELP US!

Hi to everyone!

I'm just modifying the quick search module to apport some modify at the query of the search.

Somebody knows where I can find the query?

Somebody knows where is the query of the quick search module?

Thx to all!

The query is in COMPONENTS/COM_ESTATEAGENT/estateagent.php

it's the showEASearchResult function near the 980 line.

This function can be used to link some precise result on a text link. (sorry for my english..)

You need to add a task on the easearch switch in the top of the page and link it at a copy of that function. Just modify the query and you got it!

In the link put the link that correspond at that task, example:

task added (in the EASEARCH switch): showXXX

linked function (the copy of showEASearchResult): showEASearchResultXXX

and your link is:

index.php?option=com_estateagent&act=easearch&task=showXXX

I hope I'm helpfull to someone.
:P

p.s.: in this site there isn't support...
