
Notice Undefined property: gallery

Posted by mithrantir - 2007/12/03 17:18

I am using the default template, and i get this:

Notice: Undefined property: gallery in

/var/www/vhosts/domestic.gr/httpdocs/components/com_estateagent/gui/templates/template.class.php on line 229

Please note that i used to get A HELL LOT of errors in the form of undefined variable (the global and class vars). I was somehow able to solve this only by stating some global vars named global and class.

Also, because of that, the line could be a bit different (i.e. 227 instead of 229), since there is a possibility i entered some extra lines for the vars (though i tried to enter them in empty places)

Any thoughts on how to fix the particular problem?
