## Submit button 'Save' doesn't work in frontend

Posted by alexx99 - 2007/08/22 15:58

---

Hi! I'm using EA 1.1.0 on Joomla 1.0.12. My problem: a authorized user creates in frontend a new object. This works fine until he will save the object. The 'submit button (save)' doesn't work but the other buttons work. Is there anybody around who knows/solves this problem?

Do the appropriate files/folders have writing priviliges?

Which files or folders do you mean?  
/components/com\_estateagent has '777'.

Does it work from the backend side of the site?  
Can you save objects then? If that is the case there should not be a priviliges issue.

No problems in backend. I created all objects in backend. For the next time a extern member will create the new ones in frontend. So i have to solve this problem.

did you ever solve this? I'm having the same issue. it simply does nothing when I click the save button. all other buttons work, copy (clone), cancel, etc.

No, i didnt solve the problem yet.  
It is not a problem of Templates, i changed it some times.

may i know when this bug plan to be fixed ?

not sure if <http://www.eaimproved.eu/> is related to misterestate which claims to provide improvement of estate agent.

seems like the bug on "estateagent.php", and by looking into quick hack from eaimproved, same file, the source looks like this:

```
case "new":
if (authorizeSuperVisor()==false)
{
$query = "SELECT count(*) FROM #__estateagent WHERE created_by = '$my->id'";
$database->setQuery($query);
$total = $database->loadResult();
if($total>=$seacnf->ea_maxobjects&&$seacnf->ea_maxobjects!=0){
echo "<script> alert('You have reached the maximum number of objects you can have'); window.history.go(-
1);</script>n";
exit;
}
}
```

hope misterestate's author can get some idea and appreciate the fixed asap for all fans waiting here....
