
New Objekt: How can i exclude all Countries out of

Posted by dirkauskiel - 2008/01/11 15:48

New Objekt > Expose > Selection Country

How can i exclude all Countries out of Germany?

I have modify this file "language/ german.php" with exclude-tag (/* country */) but without success.
May anybody help?

Greetings Dirk

Hello dirkauskiel,

In the file /components/com_estateagent/includes/countries.inc.php, you may find an array containing the country names:

```
$countries = array(  
//.....  
);
```

Replace the original array by the following code:

```
$countries = array( "DE" => _COUNTRY_DE );
```

Hope this helps,
ME_Fan

Great! It works :woohoo:
Thank you very much!!!

Happy to hear it worked, Dirk.

Is it you who pressed the wrong button and decreased my karma...? :P I had a karma 0 before posting the solution to your answer, now it's -1... :)

Sincerely yours,
ME_Fan

.... yes, I pressed the wrong button and decreased your karma :(
Sorry, I will change it in the next days :laugh:

i found an easy way. when you put the objects just put germany, and when someone go to use the search just see there germany, and no other contry to mess the search.
