## The Email Could Not Be Sent

Posted by ebatistella - 2007/03/14 19:31

---

I try to send a e-mail from misterstate and recieve thismessage:

The Email Could Not Be Sent

=====

To be able to use global Joomla mail parameter to send email contact of immo object,

change in estateagent.php, in sendMail function (ligne +/- 666):

```
if(mail($row->email_to,$ctf_subject,$mail_body,$header)) $msg = _EA_CTF_MSUCCESS;
```

by:

```
if(mosMail( $ctf_mail, $ctf_name, $row->email_to, $ctf_subject, $mail_body)) $msg = _EA_CTF_MSUCCESS;
```

Good luck ;)

The same problem persist.

Fatal error: Call to undefined function: check\_email() in  
/home/polodco/public\_html/web/components/com\_estateagent/estateagent.php on line 704

---

excuses due to my bad English.

I had he himself problem.

It seemed that he was because he did not have configured any contact in jommla.

Test in administration = components => contacts = manage contacts = contac to manager.

---

To put all the fields correctly specially the email.  
With this change, now it works to me correctly.

Best regards

---

if php mail method working and sending a email as normal user, than the email-formular break with failure "email could not send".  
If right "Editor", the Formular works fine.

Hi Wizzards

I am sorry - but I followed the text as I have the promlem as well. None worked to me.

I tried sendmail, PHP Mailer and SMTP. All response is "The Email Could Not Be Sent!".

By now I am using Joomla 1.0.12.

NEED HELP ASAP...

Kind regards for any help

Gerd
