
Search in My Objects doesn't work - Why?

Posted by tracker - 2008/01/27 19:39

Hi, all!

I'm using ME 1.1.0 full package. I have this problem - when I'm using My Object administration, i can't search them. I only see list of all objects and i can only sort them ascending/descending, but when i try to search a keyword in categories ---> no objects found? Why?

The quick and extended search work great but the search in My Objects doesn't until the search in My Objects in ME 1.0.3 works

I suppose there is something wrong with user.estateagent.html.php.

I have the same problem. you have resolved?
thanks

No. I haven't. T think that this is a general bug in ME 1.1.0 full, because the same thing in ME .1.0.3 works. I wrote that maybe there are errors somewhere in the code. A hope that somebody will fix it soon.

I don't have this problem!

which joomla version?

which joomla version?

Joomla! 1.0.12. I'm not very sure but I think that i've been tested ME 1.1.0 also on Joomla! 1.0.13 .

Which version of ME are you using - 1.1.0 or 1.0.3, because the search in 1.0.3 in My object works as I said in my first post.
Which is your joomla version?

Had the same problem. Running Joomla 1.0.14 and ME 1.1.
Extended search with ascending and descending options is not working.
Quicksearch seems to work...
:unsure:

I've made a stupid thing :S only for a simple test but there it is the result:

I replaced user.estateagent.php and user.estateagent.html.php from ME 1.1.0 with the same files taken from ME 1.0.3.
Then the search in My Objects in ME 1.1.0 works!!! but there are errors when trying to open objects for edit in My Objects administration.

But this was a simply test, so I think that maybe there is something wrong in the code in one or the 2 files mentioned above....or in some other file(s) in estate agent component. Come on friends, let's go together to resolve this strange bug.

I have the same problem. you have resolved?

Help !!!

joomla v1.0.15
ME v1.1.0

Hernan (Mosdata)

Hi all,

are you sure, the objects you've submitted through frontend are verified?

notice: You can set objects to be automatically verified through ME or must be verified manually through an admin.

If they aren't verified, the search can't find them naturally.

So please check, if the objects are verified and if they are, try to search them.

I got tired breaking my head for a months over this one, and i came back here just to find that this important issue has not been solved yet ???:(

is it possible ???

my objects are (auto)verified, and still i got no results returned when trying to filter them or just show one of categories in MyObjects frontend list ...

will keep search this forum, and subscribe to the thread, maybe this will got me some luck :side:
