
Hello and Help

Posted by rospo - 2008/01/30 22:24

first of all, i want to say hello to all the user of the forum and to the developer!

then, i would ask your pardon if i make lot of mistake when i write, but my english is not so good;)

then, the question about mister estate!

1)i have install it on a website to try it. i have configure the base thing, add a category and an object, published it, but when i go to the mister estate main page he show me the category but no object inside! why? do you have any idea?

2)i have download and install the MisterEstate_110_FullPackage. it's working good or is better if i install the 1.0 stable? and witch file of the 1.0 is the mister estate base component? what i have to download and install to have the base working system?

3)i would like to contribute to the project, if my boss choose mister estate for his web site. but, i have also to pay to use mister estate in a commercial website (for the GNU law) or is all free (of course the donation;))

thanks for the help (hope it's coming;))

bye

giovanni

Hi,

1. did you verify the object at the backend? If it's not verified, it won't be shown at the frontend.

2. use MisterEstate 1.1.0 FullPackage. This is the current base system.

3. MisterEstate is free, you don't have to pay! Butit would be fair, if you support the further development, if you use MisterEstate, because it will enable us to continue with the project.
