## Extra mail form fields ?

Posted by cdm - 2008/02/15 17:31

---

Hi,

I would like to add few extra fields in mail form which should be filled when writing an email from property page.

As far as I can see I need to edit `gui/extended/details.php` file.

Could some one please guide me what code should I enter to have extra fields?

tnx  
Ivan

Hi Ivan,

As far as I can see I need to edit `gui/extended/details.php` file.that's 100% exact.

You will have to add extra fields there (for example input type text, radio, checkbox and so on) and then edit the function `sendMail()` in `estateagent.php` between line 656 and 688.

Please take a look at this function. I think, it is selfexplaining how to extend it with more fields.
