## Can not add images to the gallery

Posted by carloscorreia - 2007/12/19 12:31

---

Hi,

I need some help here...

I installed the version ME 1.1.x and added Categories and Objects but I have a problem when I try to assign pictures! ME does not detect any pictures and I'm sure that I uploaded pictures to the 'Picture Directory' configured on the configuration.php file.

The only message I have when I'm editing an object and press on the 'Images' tab is:  
No Images Found. Please Click On 'Gallery' Below, To Add Images!

When I click on the 'Gallery' icon/button I get this message:  
Internal Server Error  
The server encountered an internal error or misconfiguration and was unable to complete your request.

Please contact the server administrator, webmaster@gikasa.com and inform them of the time the error occurred, and anything you might have done that may have caused the error.

More information about this error may be available in the server error log.

Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request.

And that way I can't add pictures...

Can anyone help me?

Versions  
Database: 4.1.22 Standard  
PHP: 4.4.7

---

I have the same error with 1.10  
Trying to edit from the backend I get the following errors

No Images Found. Please Click On 'Gallery' Below, To Add Images!

What Gallery, nothing shows but whitespace and if I click on the Gallery tab above, I also get a 404 error

When trying to add images from the frontend, again nothing shows that allows us to add images.

Any help is greatly welcomed...

We are using Joomla 1.13  
PHP is Version 5.05

Relevant PHP Settings:  
Joomla! Register Globals Emulation: OFF  
Register Globals: OFF  
Magic Quotes: ON

Your host server crash for incorrect use of folder permission.

Set the CHMOD permission to 755 for the folder

components/com\_estateagent/includes/gallery/

This tips successfully work whit my host server

Ciao

This has been verified, but there are many issues we have seen from incorrect folders and placements of these folders.

Missing files, but are found elsewhere except for where they should be. Not sure why this has happened, but maybe the installer script is not right and that seems to be the issue.

Incorrect spellings as found in one file which leads me to believe possible other errors of this kind. We are checking everything and correcting where possible.

Still, we are not able to upload at this time

seems many files where set to 666 for some reason. We have change these to 755 and will verify. Once again this was installed like any other program addon.
