Hello,

Where are you find it? I am not able to find it still.

Thanks
Jinendra

first install the module
after install u can see the search module in the modul list from joomla "Module" "Site Module"
one click to published an it will be displayed

but where do i find the component for the first install? I have looked, obviously nearly, everywhere on your site, but all I find is modules, languages, patches (to what??) and other bits which at the moment are totally useless to me.
