## Problem with Google Maps in component

Posted by Balterra - 2007/10/19 12:57

---

I'm sign up for Google Maps and the API meter that give you. I did, but nevertheless, when active as of maps, and try to go into some of the houses that I have set, the web is loaded is blank, no absolutamente nothing, or maps, but neither description, or anything nothing.

To see if anyone can help me fix it.

Greetings and thanks,

Balterra

I am having the same problem. I posted about this a few days ago, but no response yet. This makes 2 of us having similar problems. Anyone have any suggestions? Your help would be greatly appreciated.

I don't find any solution yet.I have been watching, but I can not think of what could happen.

I hope someone can help us.

Bye,

Balterra

---

I downloaded the latest API Plugin from <http://www.phpinsider.com/php/code/GoogleMapAPI/> and used the new class file. Now I get a bit more than a white screen, but the map itself is still not shown :(

@all

please check if PHP setting "allow\_url\_fopen" is turned ON.

Otherwise switch error reporting on to see your system's error messages.

---

"allow\_url\_fopen" is turned ON and I get the following error when setting the error reporting to maximum:

---

extended template:

Notice: Trying to get property of non-object in  
/var/www/html/web547/html/components/com\_estateagent/gui/templates/template.class.php on line 206

Notice: Trying to get property of non-object in  
/var/www/html/web547/html/components/com\_estateagent/gui/templates/template.class.php on line 207

Notice: Trying to get property of non-object in  
/var/www/html/web547/html/components/com\_estateagent/gui/templates/template.class.php on line 208

Notice: Trying to get property of non-object in

another option for me would be, just to add a google maps link like the one of map24:  
is this easily possible?

<http://www.google.de/maps?ie=UTF8&hl=de&q=Am+Markt+46,+Siegburg>

Hi,

I got the same problem at the beginning with google. But I found the reason. It is very simple : if you don't type the right spelling (example : "avenue des Champs Elysters" instead "avenue des champs Elysées" google maps will not recognize the right adress and the result will be a blank space. So when i got a blank space i check the spelling on another map and it is ok at 100% !this is may be a way to be happy !

hey everyone!

all i get is a white screen, when google maps is activated.

can anyone please summarize what to do? i don't quite get it...

thanks

---

Im having the same problem and blank screen if I able google maps... problem with me is that googlemaps can not find any road from my city... not even the ones that are written on the map... if I could use longitude and latitude instead would be great...

---

---

also another way for me would be embed the iframe from googlemaps... but the problem here is if I ad the whole code like this for example at other info box...

View Larger Map

it does not show up in the website... i think iframe does not work with joomla or with ME? any other ways to do it ?

ps. and looks like it does not work here either :)

Found the solutions! Just Download the latest Google Map API in the download section and overwrite the old file!
