

Translate state, district, street etc

Posted by gino_d - 2007/07/18 12:51

I create an .xml file based on the .xml files you provide in order to translate states, street, districts using joomfish. Translation work fine and all the details appears on expose page correctly but in search page in location search keep shown the data with no translation. Does anybody have an idea?

I have the same problem! Perhaps somebody reached a solution? The point is that the untranslated state/district.. etc, show up also in the object listings.. and this is actually the show-stopper.

p.s.: why i cannot see the code in the above posts and only see chinese?
