you don't need coordinates. put in the adress at the backend correctly and GoogleMpas will work.

Hi, it doesn't work either. I downloaded the latest gmap from your website, now there is google map on my website, but showing grey colour. see the link for example, [http://www.e-iqbal.com/index.php?option=com\\_estateagent&act=object&task=showEO&id=2](http://www.e-iqbal.com/index.php?option=com_estateagent&act=object&task=showEO&id=2)

Please advise how to show the acutal map. Thanks.

Omar Iqbal

it works fine here with firefox 2 and IE 6

I have no street names where most of my properties are, I had to go to Google and mark them on the map through them. Now I just put the name into the address in the MisterEstate and it'll show the precise spot. May take a couple of weeks to update though on the Google end.
