
How to show system on home page?

Posted by gurdip - 2007/10/18 22:47

Hi,

How do you show Mister Estate on the homepage? I can only seem to show it on an inside page by linking to the component via the menu. But on demo.misterestate.com it shows on the homepage. How was that done?

Thnx

I would also like to know. Any help? Your suggestions would be greatly appreciated.

Go to joomla admin, choose "menu" menu and choose main menu - the first item in this menu is automatically homepage. Then create a new item in this menu and link it to the component mister estate and move it to the very top of the list. :whistle:
