
Troubles...

Posted by Hyperion - 2006/01/04 16:37

Hey Darko,

finnaly its here, installed it and took it for a spin....but!

Found a few errors right from the start.

First of all i got gallery problems, when i hit the Gallery button in admin part it says the following:

Fatal error: Call to a member function on a non-object in /mounted-storage/home7/sub006/sc14815-UUSM/aleph.hr/components/com_estateagent/includes/gallery/authEA.php on line 39

Second problem is when i try to save the object i get a javascript popup saying that "The description of object is missing". The fact is that there is a description entered, and all fields are filled in.

P.S. What happened with the front-end user submissions? Thought that it would exist in 1.0 like you said :unsure:

Hi,

the current release works with Joomla only, because I've forgotten to include the lines, which tests the plattform (Mambo or Joomla).

If you want to use it with Mambo, go to line 25 in authEA.php and add "mambo.php" instead "joomla.php" at the end of the line.

Then it should work with Mambo (but not with Joomla :().

I will correct this with the next release (~ at the weekend), so that it will work with both, Mambo and Joomla.

kindly regards,

Darko
